

AMSynths CAD File Readme

Overview

The front panels for AMSynths production modules are manufactured by Beta Layout in Germany. The CAD files used are specific to Beta Layout and they provide free design software TAREGT 3001.

Here is the website: <https://uk.beta-layout.com/frontpanel/>

To get a panel manufactured you need to download the software and download the CAD file from the Manuals section of the AMSynths web site. Load the CAD file into the software and order from within the software itself.

Please check the graphics and panel holes look correct before ordering, I usually print the panel onto card and test fit before ordering.

All panels CAD files are released as Open Source Hardware under the MIT license and there is NO warranty that the panels are correct.
